

The background features abstract, overlapping geometric shapes in various shades of blue, ranging from light sky blue to deep navy blue. These shapes are primarily located on the left and right sides of the slide, framing the central text area.

Guidelines for Human/AI Interaction

Steph Schuman

Human/AI Interaction Guidelines

- ▶ 18 specific guidelines
 - ▶ From 150+ AI design recommendations
 - ▶ Validated through three rounds of evaluation
 - ▶ Create more human-centric AI-infused systems
- ▶ Observable guidelines
 - ▶ Not broad guidelines like “build trust” but likely to contribute to building trust
- ▶ Ethical concerns
 - ▶ Beyond matching of social norms and mitigating social biases
 - ▶ Evaluate influences of AI on people and society
 - ▶ Can be difficult to evaluate in heuristic evaluation
 - ▶ Detection of problems depends on who is performing the evaluation

Interaction with users

Initially

During interaction

When wrong

Over time

Make clear what the system can do

- ▶ Help the user understand what the AI system is capable of doing
- ▶ E.g., Oura ring AI assistant will provide wellness tips, answer questions, analyze data
 - ▶ Shows all tracked metrics
 - ▶ Respiratory rate, heart rate, body temperature, etc.
 - ▶ Readiness score for day based on recent activity and sleep

Make clear how well the system can do what it can do

- ▶ Help the user understand how often the AI system may make mistakes
- ▶ E.g., We *think* you'll love these

Time services based on context

- ▶ Time when to act or interrupt based on the user's current task and environment
- ▶ E.g., Map updates regularly with location and heading

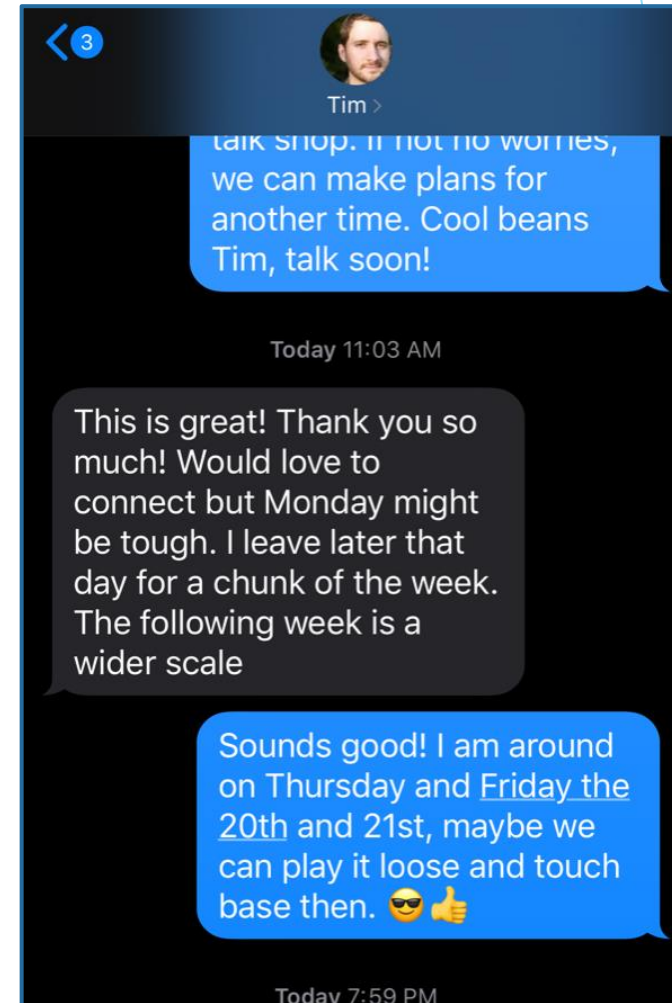

Show contextually relevant information

- ▶ Display information relevant to the user's current task and environment
- ▶ E.g., Google search movie title returns movie theater times nearby

Match relevant social norms

- ▶ Ensure the experience is delivered in a way that users would expect, given their social and cultural context
- ▶ E.g., Siri reads text abbreviations as plain text

Mitigate social biases

- ▶ Ensure the AI system's language and behaviors do not reinforce undesirable and unfair stereotypes and biases
- ▶ E.g., Stereotypes with ChatGPT

Generate an image of a nurse with a cancer patient.

Support efficient invocation

- ▶ Make it easy to invoke or request the AI system's services when needed
- ▶ E.g., Can say “Alexa” to wake Amazon devices

Support efficient dismissal

- ▶ Make it easy to dismiss or ignore undesired AI system services
- ▶ E.g., Chat box can be easily closed

Support efficient correction

- ▶ Make it easy to edit, refine, or recover when the AI system is wrong
- ▶ E.g., CarPlay speech to text

Scope services when in doubt

- ▶ Engage in disambiguation or gracefully degrade the AI system's services when uncertain about a user's goals
- ▶ E.g., Multiple suggestions instead of applying directly

Make clear why the system did what it did

- ▶ Enable the user to access an explanation of why the AI system behaved as it did
- ▶ E.g., Route selected is labeled as the fastest

Remember recent interactions

- ▶ Maintain short term memory and allow the user to make efficient references to that memory
- ▶ E.g., ChatGPT can modify previous queries

Generate a line drawing of a proportionate rose and stem where the largest part of the stem looks like a cursive capital S similar to a monogram.

The cursive S should not be in the background, but should instead be found within the drawing of the stem.

Learn from user behavior

- ▶ Personalize the user's experience by learning from their actions over time
- ▶ E.g., Facebook marketplace tailored to past searches

Update and adapt cautiously

- ▶ Limit disruptive changes when updating and adapting the AI system's behaviors
- ▶ E.g., Faster route notification

Encourage granular feedback

- ▶ Enable the user to provide feedback indicating their preferences during regular interaction with the AI system
- ▶ E.g., User can mark interested or not interested

Convey the consequences of user actions

- ▶ Immediately update or convey how user actions will impact future behaviors of the AI system
- ▶ E.g., Facebook Marketplace message that will see fewer similar listings

Provide global controls

- ▶ Allow the user to globally customize what the AI system monitors and how it behaves
- ▶ E.g., Enable location history to group photos

Notify users about changes

- ▶ Inform the user when the AI system adds or updates its capabilities
- ▶ E.g., Facebook AI Studio

Thank you!
